Environmental Compliance Manager
Sheetz, Inc.
5700 Sixth Avenue
Altoona, PA 16602

RE: **Limited Phase 2 Environmental Site Assessment Report**
Proposed Sheetz Location
North Graham Hopedale Road and North Church Street, Burlington, NC

Dear Mr. Cutshall:

Groundwater & Environmental Services, Inc. (GES) is pleased to provide the following *Limited Phase 2 Environmental Site Assessment (ESA) Report* to Sheetz, Inc. (Sheetz). This investigation was conducted in order to provide an additional assessment of potential impacts to soil and groundwater at the above referenced property identified by Sheetz for potential development of a Sheetz retail petroleum facility.

1.0 ENVIRONMENTAL SITE ASSESSMENT

The location of the Subject Property and surrounding area is illustrated on the Site Location Map presented on the U.S. Geological Survey (USGS) 7.5-Minute Topographic Map for Burlington, North Carolina (1981) as **Figure 1**. The Subject Property is located in a mixed industrial, commercial, and residential area of Burlington, North Carolina. There are commercial properties located to the south and west, government properties to the north, residential properties to the east and a large former industrial facility to the northwest, as shown in the Local Area Map, **Figure 2**. The Subject Property consists primarily of impermeable pavement which is bisected by an old section of railroad track running northwest to southeast. The Subject Property is illustrated on the Site Map presented as **Figure 3**.

On September 25, 2015, GES supervised the advancement of six soil borings (SB-1 through SB-6) on the Subject Property. The soil borings were advanced to investigate the extent of existing contamination from previous uses of the Subject Property or the migration of contaminants from surrounding properties. SB-1 was advanced in the northwest corner of the Subject Property to investigate the possible migration of contaminant plumes known to be located below the former industrial facility to the northwest. SB-2 was located adjacent to the existing underground storage tank (UST) field from the active retail petroleum facility directly across North Graham Hopedale Road. SB-3 was located in the southwest corner to investigate dissolved phase hydrocarbon contamination detected during previous investigations. The remaining three soil borings (SB-4 through SB-6) were located throughout the Subject Property to ensure no other contamination exists. The six soil borings were advanced via direct-push technology and advanced to a depth of 25 feet below ground surface (bgs). The soil boring locations are shown on **Figure 4**. The soil boring logs are provided in **Attachment A** and photo documentation of the investigation activities are provided in **Attachment B**. Following soil boring completion, a temporary well was placed into each borehole in an attempt to collect a water sample. Each temporary well was

comprised of a PVC one-inch diameter well screen and allowed to collect water for a minimum of one hour. Water samples were collected from all six temporary wells, and named MW-1 through MW-6.

1.1 Soil Sampling and Results

One soil sample was collected from each of the borings at the interval corresponding to the highest value detected with a photo-ionization detector (PID). If no PID response was observed, the soil sample was collected directly above the observed water table. Following the collection of each sample, the sample was split into two parts. One part of the sample was placed into a zip-lock bag for field screening. The zip-lock bags of soil were screened with a PID to measure the concentration of volatile organic compounds (VOCs) within the headspace. The PID values from the soil samples collected from the soil borings are presented on the boring logs, **Attachment A**. The second part of the sample was placed into the laboratory supplied soil sampling bottleware, immediately labeled, and placed on ice in a cooler in preparation for laboratory analysis.

The soil samples were submitted to Air Water & Soil Laboratories (AWS) located at 1941 Reymet Road, Richmond, VA for analysis of the site specific constituents of concern (COCs) including: benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and naphthalene via USEPA Method SW8021B, total petroleum hydrocarbons - gasoline range organics (TPH-GRO) and total petroleum range hydrocarbons - diesel range organics (TPH-DRO) via USEPA Method 8015B and RCRA 8 metals via Method SW6010C and Method SW7471B.

The analytical results from the soil samples were screened against the North Carolina Department of Natural Resources (NCDENR) soil to groundwater Maximum Soil Contaminant Concentrations (MSCC) and are presented in **Table 1**. The complete laboratory analytical report is included in **Attachment B**. A summary of the results of the soil sample analysis is listed below.

Exceedances of MSCC:

- **SB-3:** Naphthalene at 0.295 milligrams per kilogram (mg/kg) (MSCC - 0.16 mg/kg).

Detections above the reporting limit and below the MSCC:

- **SB-1:** Barium at 54.8 mg/kg (MSCC – 290 mg/kg), Cadmium at 0.460 mg/kg (MSCC – not available), and Chromium at 3.5 mg/kg (MSCC – 5.4 mg/kg);
- **SB-2:** Barium at 59.0 mg/kg (MSCC – 290 mg/kg), Cadmium at 0.526 mg/kg (MSCC – not available), and Chromium at 0.776 mg/kg (MSCC - 5.4 mg/kg);
- **SB-3:** Toluene at 0.030 mg/kg (MSCC – 4 mg/kg), Ethylbenzene at 0.142 mg/kg (MSCC – 5 mg/kg), Total Xylenes at 0.506 mg/kg (MSCC – 5 mg/kg). TPH-GRO concentrations at 11.1 mg/kg (MSCC - not available) and TPH-DRO at 16.8 mg/kg (MSCC – not available); and
- **SB-4:** Mercury at 0.011 mg/kg (MSCC – not available).

1.2 Groundwater Sampling and Analysis

On September 25, 2015, following the installation of the temporary wells within the soil borings, groundwater samples were collected from all six temporary wells (MW-1 through MW-6). Groundwater depths ranged from 13.43 feet bgs in MW-6 to 21.33 feet bgs in MW-5 during the investigation. Groundwater samples were collected from each temporary well using a peristaltic pump and each well

had dedicated polyethylene tubing. Each sample was placed in the proper bottleware and immediately placed in a cooler containing packaged ice.

The groundwater samples and associated chain-of-custody form were submitted to AWS for analysis of the site specific COCs including; BTEX, MTBE, and naphthalene via USEPA Method SW8021B, TPH-GRO and TPH-DRO via USEPA Method 8015B and RCRA 8 metals via Method SW6010C and Method SW7471B. The groundwater analytical results were screened against the NCDENR 2L Groundwater (GW) Standards and are presented in **Table 2**. The complete analytical laboratory report is included in **Attachment B**. A summary of the groundwater analytical results is listed below.

Exceedances of 2L GW Standard:

- **MW-2:** Chromium at 19.5 micrograms per Liter (ug/L) (2L GW Standard – 10 ug/L)
- **MW-3:** Benzene at 212 ug/L (2L GW Standard – 1 ug/L), and Naphthalene at 29.6 ug/L (2L GW Standard – 6 ug/L),
- **MW-5:** Chromium at 349 ug/L (2L GW Standard – 10 ug/L); and
- **MW-6:** Barium at 2,640 ug/L (2L GW Standard – 700 mg/L), Cadmium at 7.7 ug/L (2L GW Standard – 2 ug/L), Chromium at 182 ug/L (2L GW Standard – 10 ug/L), and Lead at 74.5 ug/L (2L GW Standard – 15 ug/L).

Detections above the reporting limit and below the 2L GW Standard:

- **MW-1:** Barium at 226 ug/L (2L GW Standard – 700 ug/L),
- **MW-2:** Barium at 212 ug/L (2L GW Standard – 700 ug/L),
- **MW-3:** Toluene at 7.21 ug/L (2L GW Standard – 600 ug/L), Ethylbenzene at 6.64 ug/L (2L GW Standard – 600 ug/L), Total Xylenes at 12.4 ug/L (2L GW Standard – 500 ug/L), and Barium at 350 ug/L (2L GW Standard – 700 ug/L), and TPH-GRO at 0.66 milligrams per Liter (mg/L) (2L GW Standard – not available),
- **MW-4:** Barium at 172 ug/L (2L GW Standard – 700 ug/L); and
- **MW-5:** Barium at 506 ug/L (2L GW Standard – 700 ug/L).

2.0 SITE ASSESSMENT SUMMARY

The following is a summary of the analytical results collected during the Limited Phase 2 ESA:

- The analytical results indicate that target compounds in all soil samples were either not detected or detected below the MSCC, with the exception of naphthalene detected above the MSCC in SB-3.
- The analytical results indicate that target compounds in all groundwater samples were either not detected or detected below the NCDENR 2L Groundwater Standards, with the exception of chromium in MW-2, benzene and naphthalene in MW-3, chromium in MW-5, and barium, cadmium, chromium, and lead in MW-6.
- Groundwater at the Subject Property ranged from 13.43 feet bgs in MW-6 to 21.33 feet bgs in MW-5 during the investigation.

Please do not hesitate to contact our office at (866) 222-7786 with any questions and/or comments.

Respectfully submitted,

COMMENTS:

On September 25, 2015 GES and Ground Zero performed subsurface drilling activities on the Subject Property. Ground Zero utilized a 6620DT Geoprobe rig to collect soil and temporary groundwater samples. The drill rig in this photograph was set up on boring location SB-1/MW-1 on the northwest corner of the property adjacent to the former industrial facility.

End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Air Water & Soil Laboratories, Inc.

Summary of Data Qualifiers

- Cl Residual Chlorine or other oxidizing agent was detected in the container used to analyze this sample.
- M Matrix spike recovery is outside established acceptance limits
- P Duplicate analysis does not meet the acceptance criteria for precision
- S Surrogate recovery was outside acceptance criteria
- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- D.F. Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

Sample Conditions Checklist

Opened by: (Initials) BR

Lab ID No.: 15I0632

Date Cooler Opened: 9/28/15

YES NO N/A

1. How were samples received?
Fed Ex
UPS
Courier
Walk In
2. Were custody seals used?
3. If yes, are custody seals unbroken and intact at the date and time of arrival?
4. Are the custody papers filled out completely and correctly?
5. Do all bottle labels agree with custody papers?
7. Is the temperature blank or representative sample within acceptable limits?
(above freezing to 6°C)
8. If NO, are the samples just taken and received on ice?
9. Are all samples within holding time for requested laboratory tests?
10. Is a sufficient amount of sample provided to perform the tests indicated?
11. Are all samples in proper containers for the analyses requested?
12. Are all samples appropriately preserved for the analyses requested?
13. Are all volatile organic containers free of headspace?
14. Are all TOX containers free of headspace?
15. Is Trip blank provided with each VOC sample set? Circle applicable method:
(Document if trip blank is not received with the sample set)
